

**Floor Statement for Senator Jon S. Corzine
On the Introduction Of
The Veterans Comprehensive Hepatitis C Health Care Act**

July 29, 2005

M. President, I rise today along with my colleague, Senator Lautenberg, to introduce the Veterans Comprehensive Hepatitis C Health Care Act. This bill would fundamentally change the way the Department of Veterans Affairs is addressing the growing Hepatitis C epidemic, and would create a national standard for testing and treating veterans with the virus.

Hepatitis C is a disease of the liver caused by contact with the Hepatitis C virus. It is primarily spread by contact with infected blood. The CDC estimates that 1.8 percent of the population is infected with the Hepatitis C virus, and that number is much higher among veterans. Vietnam-era veterans are considered to be at greater risk because many were exposed to Hepatitis C-infected blood as a result of combat-related surgical care during the Vietnam War. In fact, data from the Veterans Administration suggests that as many as 18 percent of all veterans and 64 percent of Vietnam veterans are infected with the Hepatitis C Virus (HCV). Veterans living in the New York-New Jersey metropolitan area have the highest rate of Hepatitis C in the nation. For many of those infected, Hepatitis C leads to liver failure, transplants, liver cancer, and death.

And yet, most veterans who have Hepatitis C don't even know it--and often do not get treatment until it's too late. Despite recent advances in treating Hepatitis C, the VA still lacks a comprehensive, consistent, uniform approach to testing and treating veterans for the virus. Only a fraction of the eight million veterans enrolled nationally in the VA Health Care System have been tested to date. Part of the problem stems from a lack of qualified, full-time medical personnel to administer and analyze the tests. Most of the 172 VA hospitals in this country have only one doctor, working a half day a week, to conduct and analyze all the tests. At this rate, it will take years to test the entire enrolled population--years that many of these veterans may not have.

To address this growing problem, M. President, I am again introducing the Veterans Comprehensive Hepatitis C Health Care Act. This legislation will improve access to Hepatitis C testing and treatment for all veterans, ensure that the VA spends all allocated Hepatitis C funds on testing and treatment, and sets new, national policies for Hepatitis C care. Congressman Rodney Frelinghuysen from New Jersey has introduced companion legislation in the House of Representatives.

The bill would improve testing and treatment for veterans by requiring annual screening tests for Vietnam-era veterans enrolled in the VA health system, and providing annual tests, upon request, to other veterans enrolled in the system. Further, it would require the VA to treat any enrolled veteran who tests positive for the Hepatitis C virus, regardless of service-connected disability status or priority group categorization. The VA would be required to provide at least one dedicated health care professional--a doctor and a nurse--at each VA Hospital for testing and treatment of this disease.

This bill would also increase the amount of money dedicated to Hepatitis C testing and treatment, and would make sure these funds are spent where they are needed most. Beginning in FY06, Hepatitis C funding would be shifted to the Specific Purpose account under the Veterans Health Administration, and would be dedicated solely for the purpose of paying for the costs associated with treating veterans with the Hepatitis C virus. The bill would allocate these funds to the 22 Veterans Integrated Service Networks (VISN) based on each VISN's Hepatitis C incidence rate, or the number of veterans infected with the virus.

In addition, this bill will end the confusing patchwork of policies governing the care of veterans with Hepatitis C throughout the nation. This legislation directs the VA to develop and implement a standardized, national Hepatitis C policy for its testing protocol, treatment options and education and notification efforts. The bill further directs the VA to develop an outreach program to notify veterans who have not been tested for the Hepatitis C virus of the need for such testing and the availability of such testing through the VA. And finally, this legislation would establish Hepatitis C Centers of Excellence in geographic areas with high incidence of Hepatitis C infection.

The VA currently lacks a comprehensive national strategy for combating this deadly disease. The Veterans Comprehensive Hepatitis C Health Care Act will ensure that veterans will finally be provided with the access to testing and treatment that they have more than earned and deserve. And, the Federal Government will actually save money in the long run by testing and treating this infection early. The alternative is much more costly treatment of end-stage liver disease and the associated complications, or other disorders.

The VA has known about the problem of Hepatitis C among veterans since 1992, but they have not acted. We must address this critical issue for the brave men and women who have placed their lives in danger to protect the United States. I urge my colleagues to join me in supporting this crucial legislation.
